Eduardo Gonik

Data Engineer

La Plata · Argentina · gonik@quimica.unlp.edu.ar · eduardogonik@gmail.com · · LinkedIn · egonik-unlp.github.io

Profile

I am an AI-oriented Data Engineer with a scientific background that includes mathematical modelling of physicochemical processes. My work combines data engineering and software development with an interest in machine learning, mathematical methods, and the systems that support them. I prefer organised code, functional approaches, and tools that expose rather than hide how a system works.
Across my professional, teaching and scientific career I have worked within multidisciplinary teams and have learned to communicate technical work to specialists and non-specialists alike. I contribute an independent perspective while adapting my explanations to my audience, an approach shaped by ten years of university teaching. I take particular interest in researching unfamiliar problems and translating what I find into practical guidance for colleagues.

Work

Experience

Universidad Nacional de La Plata Jul 2016 – present

Teaching Assistant — Chief of Practical Classes

Teaching Assistant (10 years) — Chief of Practical Classes (1 year).

Snappler Aug 2025 – Sep 2026

Data Engineer

I developed AI-based products in Snappler's AI Lab, focusing on how data is managed, analysed and used within applications. My work included building asynchronous and real-time data analysis pipelines, developing agentic systems, implementing tracing across AI-based applications, and optimising and refining RAG search.

OpenAI | LangChain | LangGraph | Claude Code | Node.js | TypeScript | Docker | PostgreSQL | AWS | Langfuse

Goodvibes Movement Mar 2021 – Mar 2026

Software + Data Engineer

Whilst at Goodvibes I've been the sole internal developer with responsabilities spanning data integrity and auditing, internal tool development and application development. Some hallmark projects include

- An API as part of the company's application in charge of detecting ingredients in product labels using OCR and mathematical tools for ingredient approximation
- An internal tool for generating product and ingredient reports that can then be consumed an presented in our website
- A full rewrite of the ingredient recognition app.

Docker | GCP | Leptos | Rust | Julia | Python | Flask | Axum

Stack

Languages

JavaScript / TypeScript · **Rust** · Zig · **Julia** · **Python** · Go · OCaml

Databases

PostgreSQL · Redis · Qdrant

Frameworks

LangChain · **LangGraph** · **Express** · Keras · burn · Leptos · **Axum** · Actix Web · Express · Flask · Julia data ecosystem

Platforms

Linux · Windows · macOS

Selected projects

Lensing
active

github.com/egonik-unlp/lensing

A framework for building datasets from Qdrant, training and comparing prediction models across Rust, Python, and Julia, and exporting selected models to ONNX. An Axum service and React interface keep experiments, metrics, and the model registry together.

JavaScript · Rust · Python · Julia

LVV
active

github.com/egonik-unlp/lvv

A library for converting arbitrary structured data into vector embeddings. It supports configurable transformations, including LLM-assisted preprocessing, before data enters an embedding or retrieval pipeline.

Rust

Infinite Playlist
active

github.com/egonik-unlp/spotify-next-track · live demo

An endless playlist generated from a song or Spotify playlist. A next-track model trained in the spotify-next-track Lensing project runs in the browser and picks each new song from my listening library.

Python · Rust · JavaScript · WebAssembly

Background

Education

Doctorate of the Faculty of Exact Sciences, Chemistry area — 2019 – present

Facultad de Ciencias Exactas · Universidad Nacional de La Plata

in progress

Licentiate in Biotechnology and Molecular Biology (5-year degree) — 2013 – 2018

Facultad de Ciencias Exactas · Universidad Nacional de La Plata

Grade: 8.21

Certifications

Certificate of Advanced English

University of Cambridge ESOL · C2 · A

Selected publications

Four of seven publications.

Development of Metal-Organic Nanoparticles Based on Zr6(μ3-O)4(μ3-OH)4 Clusters linked by Perylene-3,4,9,10-Tetracarboxylic Acid: Visible-Light Photocatalytic Redox Properties for Contaminant Degradation and Hydrogen Peroxide Generation

Cacciari, D.; **Gonik, E.**; Beltrán, A. M.; Mizrahi, M.; Ezquerra Riega, S.; Rodríguez, H.; González, M.

ACS Catalysis

Staphylococcus aureus biofilm eradication by the synergistic effect exerted by PEG-coated silicon dots immobilized in silica films and light irradiation

Gonik, E.; Rodríguez Sartori, D.; Gara, P. D.; Miñán, A.; Fernández Lorenzo, M.; González, M. C.

Nanotechnology · 2020 · vol. 32 · London

Impact of protein conformational diversity on AlphaFold predictions

Saldaño, T.; Escobedo, N.; Marchetti, J.; Zea, D. J.; Mac Donagh, J.; Velez Rueda, A. J.; **Gonik, E.**; García Melani, A.; Novomisky Nechcoff, J.; Salas, M. N.; Peters, T.; Demitroff, N.; Fernandez Alberti, S.; Palopoli, N.; Fornasari, M. S.; Parisi, G.

Bioinformatics · 2022

Incorporation of N and O into the Shell of Silicon Nanoparticles Offers Tunable Photoluminescence for Imaging Uses

Romero, J. J.; Dell'Arciprete, M. L.; Rodríguez, H. B.; **Gonik, E.**; Cacciari, D.; Moore, A. L.; González, M. C.

ACS Applied Nano Materials · 2022

Supervision

Cecilia Betiana Rodríguez — 2023

co director · undergraduate thesis · Universidad Nacional de La Plata

Development of zirconium- and porphyrin-based metal-organic nanostructured materials for the photodegradation of emerging contaminants
